

Revisions Based on Previous Review Comments

Here we provide a brief overview of the major updates according to previous reviewers.

- (1) We conduct training time comparison experiments with recent baselines to comprehensively validate and analyze the model's efficiency, with the results reported in Section V-F.
- (2) We conduct additional experiments to investigate the potential performance gains obtained by replacing the current pretrained model with more advanced alternatives. The corresponding results and analysis are reported in Section V-E.
- (3) We refine and expand the analysis and explanation of Eq. (17) in Section IV-C of the manuscript to facilitate better understanding.
- (4) We have thoroughly proofread the manuscript and corrected all identified typographical errors throughout the paper.
